TERMS & CONDITIONS

SALE ORDER & SUPPLEMENTAL INFORMATION

Sale order is catalog order. Any additional information or corrections to the printed sale catalog will be available online at www.Wagyu365.com and <https://bid.live-ag.com/>

WATCH LIVE & BID ONLINE

We have made preparations to bid and buy livestock through LiveAg's bidding platform for those unable to attend in person sale day. Please note that all lots in the sale will be available for viewing online prior to sale day at: <https://bid.live-ag.com/>

If you need assistance with registration or with either bidding platform, call LiveAg at 817.533.6699

REGISTRATION & TRANSFERS

As soon as the cattle are paid for, the cattle sold will be transferred (registrations) to the new owners through the offices of the American Wagyu Association. The fee is paid for by the seller.

TRUCKING

Contact any team member of Wagyu365 for their assistance with your trucking needs.

LOCATION

All cattle will be located at the following address for pick up: 9300 Jalowy Rd, Sealy, TX 77474

HEALTH PAPERS

All cattle sold will be accompanied by appropriate health papers for immediate intrastate shipment. Additional health testing may be required for interstate shipment.

LIVESTOCK MORTALITY INSURANCE

Any representative of the Wagyu365 team can assist any buyer with insurance regarding their purchases.

TERMS & CONDITIONS

Cattle will be sold under the Standard Terms and Conditions of the American Wagyu Association. Please log onto <https://wagyu.org/>

GENETIC CONDITIONS

Log onto <https://wagyu.org/> and go to the animal search and any available results of the genetic testing will be found on the lot selling.

ANNOUNCEMENTS

Any updates or announcements made on sale day from the block or by sale management will take precedence over printed or digital materials.

SETTLEMENT OF PAYMENT

All lots must be paid for immediately following the conclusion of the R-C Ranch Inaugural Wagyu Sale, unless prior payment arrangements have been made with any representative of Wagyu365. All purchases are final. Full payment is required prior to the release or shipment of any animal or genetics. No animal will be transferred or delivered until full payment has been confirmed.

Buyers are welcome to pay by check (sent certified mail or priority mail with tracking), wire transfer, or ACH/Credit Card (3% convenience fee applies to both ACH and card payments).

Auction money and proceeds will be conducted under Randall O. Ratliff, DBA R & R Marketing, P.O. Box 60097, Nashville, TN 37206. Bond # 7901027402 (U.S. Department of Agriculture, Grain Inspection, Packers and Stockyards Administration Packers & Stockyards Program).

Dear Friends and Fellow Wagyu Enthusiasts,

On behalf of Wagyu365, welcome to the R-C Ranch Inaugural Live Online Sale, taking place August 27 on Live-Ag.com.

This sale represents far more than an outstanding offering of Fullblood Wagyu genetics—it showcases a program built on proven performance. Since its founding in 2010, R-C Ranch has grown into one of America’s premier vertically integrated Wagyu beef companies by never losing sight of its mission: produce exceptional cattle, exceptional beef, and earn the trust of every customer.

What makes this program unique is its commitment to real-world validation. Every breeding decision is backed by commercial production, harvest data, and carcass performance—not simply predictions. With more than 5,000 head harvested over the past decade and a branded beef program serving hundreds of restaurants and retailers across the country, R-C Ranch offers genetics that have been proven where it matters most - in the marketplace.

Whether you’re investing in productive females or herd sires you’ll find cattle backed by one of the industry’s most progressive and proven breeding programs that is a beef program first, tried and proven.

Thank you for your interest in R-C Ranch. We invite you to join us on August 27 and experience this inaugural event on Live-Ag.com.

Sincerely,

The Wagyu365 Sale Management Team

WATCH & BID LIVE

R-C RANCH WANTS TO MAKE YOUR BUYING EXPERIENCE ENJOYABLE AND CONVENIENT

CALL US IN ADVANCE

This old-school way is still alive and well, and the teams at R-C Ranch and Wagyu365 are here to help you. When your schedule makes it impossible to join us, please just take a quick moment and give any of the sale day numbers a call. We can visit about the cattle that interest you, set up a time to preview the cattle, and even offer an opinion. In other words, we are here to help make your buying experience enjoyable, convenient and fun — satisfaction guaranteed!

REAL-TIME PHONE BIDS

Not quite as old-school as calling us in advance of sale day but still a tried and true method of buying sale cattle, particularly if you don't have reliable highspeed internet. Call any of your friendly Wagyu365 Team contacts, or you may call LiveAg at 817.533.6699.

ONLINE BIDS

Technology does have its advantages and it's pretty cool. We aim to be on the cutting edge of all technology, allowing us to better serve you. If you have highspeed internet, may we suggest the online bidding platform of Live Ag, which you can find at Bid.Live-Ag.com/

WINNING BIDDER

If you are a winning bidder, please follow these closeout steps:

- 1.) You will receive a buyer invoice via email from the Live Ag Platform the night of the sale (please check your spam folder)
- 2.) Once the invoice is received, please choose one of the following payment options ...

Wire transfer: Please request wire instructions by contacting Abby Hinton at abby@wagyu365.com or via text at 919.618.8098

Mail a check with tracking: Please make checks out to Wagyu 365, and send to mailing address: PO Box 60097, Nashville, TN 37206.

Credit card payments: You may request a quickbooks invoice link to input your own information, or call during our business hours 9-5, Monday through Friday (3% fee applies to all credit card payments). Contact: Abby Hinton, abby@wagyu365.com or 919.618.8098 For paying by bank account transfer: Please request a quickbooks link to be sent to your email. (3% fee applies to all quickbooks payments) Contact: Abby Hinton, abby@wagyu365.com or 919.618.8098

3.) Once your payment has been processed, you will be sent an email from the Wagyu 365 office with R-C Ranch copied stating your purchases have been released for pick up. Buyers are responsible for any cost pertaining to transportation of the live cattle. Each animal will be verified to the buyer and must have a "paid" invoice. Health papers will be provided by sale management company for load-out.

4.) No live cattle are allowed to leave the R-C Ranch location with a new buyer/owner unless payment has cleared through Wagyu365.

Contact for all invoice and payment questions:

Wagyu365, Abby Hinton at Abby@wagyu365.com, 919.618.8098. We ask you to please be patient during the close out process after the sale as we field everyone's requests.

BUILT ON TEXAS ROOTS

Before R-C Ranch became one of America's leading Wagyu beef programs, it was simply two Texan families with a shared passion for quality, hard work, and exceptional food.

For Ryan Cade, ranching was woven into family life. He grew up watching his grandfather balance life in Brazoria County - serving in the Coast Guard, operating shrimp boats, selling seafood from the back of a truck, and raising cattle. Those early experiences instilled in Ryan the values of integrity, grit, and earning a customer's trust.

When Ryan and his lifelong friend, Blake Robertson, tasted their first Wagyu steak at a restaurant, they knew that average beef was a thing of the past. Together, Ryan and Blake shared a vision: build a beef company that could connect consumers directly to the ranch while producing the highest-quality American Wagyu possible. The pair began laying the foundation for what would become R-C Ranch.

With the long-standing tradition of Texas family ranching in their blood, co-founders Blake Robertson and Ryan Cade created R-C Ranch in 2010 to deliver premium, uncompromising Wagyu beef.

The early days were anything but glamorous. Ryan knocked on the back doors of Houston restaurants introducing chefs to Wagyu, while Blake delivered beef in the back of a red pickup truck. Ryan and Blake spent countless hours building relationships with chefs, customers, and fellow producers, believing that if they could tell the story behind the beef, people would understand the difference.

As the operation grew, so did the team's capacity when co-producer Parker Johnson expanded his involvement as

an investor and co-owner, leading to partnerships with top restaurants and retailers across the South.

What started with ten heifers, two families, and a commitment to doing things the right way has grown into a nationally recognized Wagyu brand that harvested 1,000,000 pounds of beef in 2025 and has been sold in more than 3,000 retailers and 500 restaurant and foodservice operations. Yet the mission remains unchanged: raise exceptional cattle, produce exceptional beef, and earn the trust of every consumer who brings R-C Ranch to their table with Gold Standard beef.

A VISION BUILT ON PROVEN PERFORMANCE

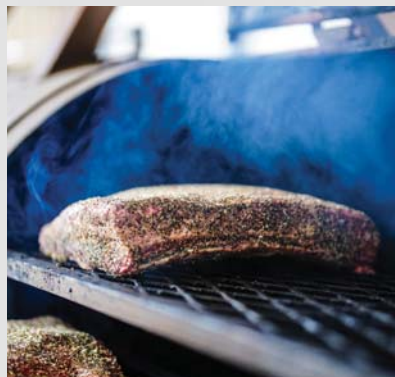

From the very beginning, R-C Ranch set out to be more than a ranch - it saddled up to become a trusted beef company.

After proving the concept through local restaurants and farmers markets, the team knew it was time to scale. But growth would never come by sacrificing quality. Instead, every decision centered on building a vertically integrated program where genetics, cattle management, and exceptional beef worked together.

Today, that vision has become reality. R-C Ranch beef has been serving by over 500 restaurants, distributed by regional and national food-service partners, featured in more than 3,000 leading retailers, and continues to reach more consumers every year. What started with deliver-

1+ MILLION POUNDS
OF BEEF HARVESTED
LAST YEAR ALONE.

ies in the back of a pickup truck has evolved into a nationally recognized American Wagyu brand that has harvested over 5,000 cattle over the years and produced 1,000,000 pounds of beef last year alone.

Yet the company's greatest opportunity still lies ahead.

As demand for premium Wagyu continues to grow, R-C Ranch is expanding through partnerships with producers who share its commitment to quality, stewardship, and proven genetics. Every ranch that becomes part of the program will operate under the same uncompromising standards that have defined R-C Ranch from the beginning.

At the heart of that standard is proven data. More than a decade of real-world harvest, feedyard, and carcass performance has created one of the industry's most proven genetic programs. While EPDs and genomic predictions remain valuable tools, R-C Ranch believes there is no substitute for cattle that have demonstrated profitability through actual commercial production.

The vision is simple: become the gold standard for American Wagyu by helping producers raise more profitable cattle, giving consumers a beef source they can trust, and strengthening the future of the breed for generations to come.

PROVEN THROUGH PERFORMANCE

Every breeding decision at R-C Ranch begins with one question: Will these genetics produce better beef?

Rather than relying solely on EPDs or genomic predictions, R-C Ranch validates genetics through one of the industry's most comprehensive real-world production programs. Every year, cattle are harvested through our commercial beef supply chain, generating valuable data from the feedyard to the packing plant and ultimately to the consumer's plate.

Over more than a decade, R-C Ranch has harvested more than 5,000 head of cattle, creating a database that measures the traits that truly impact profitability. Last year alone, R-C Ranch harvested over 1 million pounds of beef. Feed efficiency, average daily gain, carcass weight, marbling, ribeye area, fertility, structural soundness, and docility are all tracked and evaluated - not as predictions, but as proven results.

Many of our leading sires have produced 50 to more than 100 harvested progeny, allowing the team to understand with remarkable confidence how each bloodline performs in commercial production. Internal sire rankings and carcass value analyses help identify the genetics that consistently deliver the optimal balance of growth, efficiency, and premium carcass quality.

This extensive data collection has allowed R-C Ranch to continually improve the herd. Feed conversions have become more efficient, growth rates have increased, carcass weights have climbed significantly, and intramuscular fat has become both higher and more consistent - all while maintaining the exceptional eating experience that defines American Wagyu.

The result is a breeding program built on evidence instead of assumption.

At R-C Ranch, genetics earn their place because they have proven themselves in a commercial beef program, not because an algorithm predicts they should. Our commitment to real-world validation is what gives customers confidence and producers the assurance that every animal offered has been selected with one goal in mind: delivering profitable, predictable, and proven performance.

THE R-C RANCH BRANDED BEEF PROGRAM

The R-C Ranch Branded Beef Program is more than a market for exceptional cattle - it is the engine that drives every genetic decision we make.

Unlike traditional seedstock operations, R-C Ranch owns and manages one of the nation's premier vertically integrated American Wagyu beef programs. Every stage of the supply chain, from genetics and ranch management to feeding, harvesting, fabrication, and marketing, is connected by one goal: producing exceptional beef while collecting the data needed to continually improve the herd.

Because cattle ultimately enter the R-C Ranch branded beef program, every genetic decision receives real-world validation. Feedyard performance, carcass merit, consumer demand, and chef feedback all become part of the selection process, creating a continuous cycle of improvement that benefits both the beef business and the seedstock program.

Today, R-C Ranch beef is trusted by leading chefs, retailers, and foodservice partners throughout the United States. The brand has grown from a handful of local restaurant customers into a nationally recognized premium Wagyu program distributed through multiple regional and national foodservice partners. The result is a reliable, premium outlet for cattle that meet the R-C Ranch Gold Standard while strengthening demand for superior American Wagyu genetics.

The success of the branded beef program has been made possible through outstanding partnerships, including:

RESTAURANT PARTNERS

- Fearing's Restaurant – The Ritz-Carlton Dallas
- Federal American Grill
- El Tiempo Cantina
- Little Woodrow's
- Twin Peaks Restaurants
- Pearl & Vine

RETAIL PARTNERS

- H-E-B
- Walmart
- Brookshire Brothers
- Spec's Wine, Spirits & Finer Foods
- Steinhäuser's
- The Texan Stores
- Timewise Convenience Stores

Beyond these partnerships, R-C Ranch beef is distributed through regional and national foodservice distributors and has been served in more than 500 restaurants while reaching consumers through over 3,000 retail locations.

For seedstock customers, the branded beef program provides something invaluable: confidence. Every bull, female, and embryo offered has been developed within a production system where profitability is measured, carcasses are harvested, data is captured, and genetics are continually proven in the marketplace. It is this connection between ranch, consumer, and real-world performance that makes the R-C Ranch Branded Beef Program one of the strongest validation systems in American Wagyu.

AN R-C RANCH WELCOME

What if the next generation of your herd wasn't built on promises - but on proof?

That's the question that has driven Blake Robertson and me from the very beginning. We didn't set out simply to raise Wagyu cattle. We set out to build the very best Wagyu beef company in the industry.

Like many ranchers, our journey started with a passion for cattle. But after experiencing the remarkable quality of Wagyu beef firsthand, we knew there was an opportunity to create something different. We believed that if we focused relentlessly on genetics, performance, and consistency, we could produce beef that would redefine expectations - not just for consumers, but for the entire industry.

As R-C Ranch grew, co-producer Parker Johnson joined us as a business partner. Parker and his family spent decades building elite cattle genetics, and their commitment to quality at VP Ranch helped accelerate our growth with experience, genetic expertise, and shared commitment to continuous improvement.

Since 2015, we've learned what works. Every decision we've made has been guided by one goal: deliver exceptional beef by producing exceptional cattle. Today, R-C Ranch is trusted by more than 2,000 chefs, restaurants, and retailers across the country because they know our genetics produce the quality, consistency, and eating experience their customers expect every single time.

But outstanding beef starts long before harvest - it begins with the right genetics.

That's why our breeding program is built on real-world performance, not theory. We have spent more than a decade collecting and analyzing feedyard and harvest data, EPDs, EBVs, and seven core production ratios that allow us to make informed genetic decisions with confidence. These aren't cattle developed under ideal conditions for a catalog - they're genetics proven in a true production setting where efficiency, carcass value, and profitability matter.

Our philosophy has always been simple: maximize the traits that create value while never compromising consistency. That commitment has positioned R-C Ranch as an industry leader in genetic advancement. We're proud to own and develop Itoshigenami 752E, the industry's #1 IMF EPD animal, earning the highest accuracy among the top 100 animals ranked for this economically important trait. It's one example of our unwavering commitment to building genetics that move the breed forward.

Whether you're searching for herd sires, replacement females, or genetics that can elevate your operation for years to come, we're honored you've chosen to spend your time with us during our inaugural sale.

On behalf of our entire family and team, welcome to the R-C Ranch Production Sale. We sincerely appreciate your confidence, your friendship, and the opportunity to partner with you in building the future of American Wagyu.

We look forward to seeing what we can accomplish together.

Ryan Cade

HIRASHIGETAYASU J2351

FB670 | FULLBLOOD BULL

Hirashigetayasu J2351 (FB670) stands among the most proven foundation sires ever imported from Japan, combining the rare influence of the Kedaka, Fujiyoshi, and Tajima bloodlines into one exceptionally balanced genetic package. Backed by an official Japanese progeny test in which at least 80% of his steer progeny achieved the coveted A5 carcass grade, ETJ001 has earned an international reputation for transmitting outstanding growth, structural correctness, maternal excellence, and consistently high-quality carcasses. His offspring are recognized for larger frames, superior feedlot performance, heavy muscling, excellent ribeye area, quiet dispositions, and carcasses that consistently grade at the upper end of the quality spectrum. His daughters have become equally valuable as productive brood cows noted for exceptional udders, abundant milk production, fertility, and longevity. With more than 532 registered progenies in the United States and over 3,040 registered progenies in Australia, Hirashigetayasu remains one of the most influential and widely utilized Fullblood sires in the history of the Wagyu breed. His ability to blend commercial performance with premium carcass merit continues to make ETJ001 one of the industry's true benchmark foundation bulls.

HIRASHIGETAYASU J2351 LINEAGE

Donor Dam TBR Hikofuku 3-3 2110Y (FB15528) represents the kind of elite donor female that has helped shape progressive Fullblood Wagyu breeding programs. Shie is a marquee donor for the R-C program. On the 7-carass progeny harvested, 6/7 hit the top grade. One MIJ recorded at 36.19%. 2 of her sons 2K9 and 2K10 hit 36%.

Sired by the legendary World K's Sanjiro (FB2501), one of the breed's most influential carcass sires, and backed by the proven TBR Hikofuku cow family through TBR Hikofuku 3 9063W (FB11170), she combines generations of genetics recognized for exceptional marbling, maternal consistency, structural

integrity, fertility, and longevity. Developed within the renowned Triangle B Ranch program, 2110Y brings together two of the breed's most respected bloodlines in a female designed to produce elite breeding cattle. The daughters selling from this donor carry the maternal strength, genetic predictability, and carcass potential that have made these genetics highly sought after by leading Wagyu breeders. At R-C Ranch, we believe lasting cow families are built on proven maternal excellence, and the influence of 2110Y provides the kind of foundation capable of producing outstanding replacement females, herd sires, and premium beef genetics for generations to come.

HIRASHIGETAYASU J2351 LINEAGE

Donor dam TBR Hikofuku 4-1 2116Y (FB14292) represents the type of donor female that builds cow families capable of influencing a breeding program for generations. Developed by the renowned Triangle B Ranch, she combines the proven carcass excellence of World K's Sanjirou (FB2501) with the maternal power and longevity of the respected TBR Hikofuku cow family through TBR Hikofuku 4 9064W (FB11171). This genetic combination has long been recognized for producing cattle that balance elite marbling, ribeye expression, structural integrity, body capacity, fertility, and maternal productivity.

Selected by R-C Ranch for her exceptional breeding value, 2116Y has become an important maternal influence within the program. Her daughters have been retained to strengthen the R-C donor battery, continuing the genetic consistency, brood cow

quality, and carcass potential that have made the Hikofuku family one of the most respected maternal lines in the Fullblood Wagyu breed. The consistency found throughout her descendants reflects the kind of predictability serious breeders seek when building elite cow families.

At R-C Ranch, we believe the value of a donor female is measured not simply by her pedigree, but by the quality of the cattle she leaves behind. Descendants of 2116Y continue to demonstrate the maternal strength, structural correctness, and carcass-oriented genetics demanded by today's progressive Wagyu industry. Whether producing future donor females, herd sires, or cattle designed to excel from pasture to plate, the influence of TBR Hikofuku 4-1 2116Y provides a proven genetic foundation that will continue to add value for generations.

LOT 5

- Daughter of 001 Hirashigetayasu in her prime-time years
- Unbeatable pedigree with Takeda Farms building the maternal side
- Legendary Hikokura 1/10 anchors this genetic masterpiece
- Amazing combination of growth and carcass from highly proven sires
- 001 x Sanjirou x TF 147 Itoshigefuji x Kimifuku 3 x Hikokura 1/10
- Invest in a piece of Wagyu genetic history

Itoshigefuji TF147 is one of the most influential and commercially proven foundation sires ever exported from Japan. A Takeda Farm-bred son of Itofuji and Dai 30 Noboru, TF147 combines approximately 56% Shimane, 41% Okayama and 3% Kedaka influence, giving him an exceptional balance of frame, growth, efficiency, maternal value and carcass quality. Published Australian Fullblood harvest data reports his progeny averaging an impressive 1,150-pound carcass weight while maintaining an average Australian marbling score of 8.5 out of 9 - an extraordinary combination of carcass pounds and premium meat quality. A mature bull reported to weigh approximately 2,640 pounds, Itoshigefuji consistently transmitted added size, early maturity, strong average daily gain, efficiency and highly marbled, tender beef. His daughters continue to be some of the biggest, stoutest females who have been the most productive in our system. While not known for marb, 88% of his carcass progeny hit our mid grade or higher up to 30.6% IMF. (See carcass images.) With more than 4,400 registered progenies recorded across the Australian and American herdbooks by 2020, TF147 ranks among the most extensively used foundation sires in the global Wagyu population. Few bulls have matched his ability to add growth and carcass weight while preserving the marbling and eating quality demanded by premium Wagyu programs, making Itoshigefuji TF147 a true foundation sire for balanced, profitable beef production.

REFERENCE SIRE

REF

BAR R SHIGESHIGETANI 30T

FB8177 | FULLBLOOD BULL

Bar R Shigesigetani 30T (FB8177) is widely regarded as one of the most extensively proven Fullblood Wagyu sires in North America. A direct son of the legendary World K's Shigesigetani and backed by the powerful Bar R 68P cow family, 30T combines elite carcass genetics with exceptional maternal value and structural integrity. He leads the entire American Wagyu Association registry in recorded carcass data, with hundreds of harvested progenies contributing to some of the highest-accuracy carcass EPDs in the breed. Proven through multiple Washington

State University National Wagyu Sire Summary progeny tests, his offspring have ranked #1 for Backfat, #2 for Ribeye Area, #13 for Carcass Weight, and #27 for Marbling among 109 evaluated sires, while earlier summaries placed him #1 for Ribeye Area, #1 for Carcass Weight, #2 for Backfat, and #8 for Marbling. He has been one of the most prolific sires for our supply chain who's progeny have performed exceptionally well by bringing much needed growth, carcass weight, and ribeye. Said progeny were the first in our program history to average 950 HCW at 24 months of age. Pairs especially well with Tajima type females. With more than 330 registered progenies, 30T consistently sires cattle that combine exceptional carcass merit, growth, muscle expression, maternal excellence, longevity, and quiet dispositions. Few sires in the modern Wagyu breed have been validated by as much real-world harvested progeny data, making Bar R Shigesigetani 30T one of the most reliable and profitable carcass genetics available today.

YYW Y2 KEDAKANAMI D031

FB28784 | FULLBLOOD BULL

YYW Y2 Kedakanami D031 combines the growth, efficiency and maternal strength of the Kedaka/Tottori bloodline with the proven carcass excellence of Itoshigenami TF148. Registered as FB28784, D031 is a direct son of one of the breed's highest-performing Kedaka sires and out of JC Ms Itoshigenami 010, a direct TF148 daughter, creating an outstanding balance of performance and carcass genetics.

Rotationally bred with a remarkably low 1% coefficient of inbreeding, D031 incorporates the breed's most influential carcass

families - including Itoshigenami, Takazakura, Michifuku, Haruki II and Okutani - while maintaining exceptional genetic diversity.

Breeder reports consistently describe his F1, F2 and Fullblood progeny as exhibiting excellent growth, structural correctness, muscle expression, maternal value and feed efficiency, reflecting the strengths traditionally associated with the Kedaka lineage. Tested free of all known recessive genetic disorders and carrying an SCD genotype of AA, YYW Y2 Kedakanami D031 offers breeders an outstanding opportunity to combine growth, functionality and elite carcass genetics. He has been very influential in driving profitability to our supply chain by delivering big time growth and carcass weight without sacrificing marbling across 60+ progeny, many achieving 30-37% IMF. Pairs especially well with Tajima type females. (See carcass images). Although no public sire-specific harvest summary has been published documenting average carcass performance, his pedigree and reported progeny performance position him as a valuable sire for progressive Fullblood and crossbreeding programs.

MAYURA L0010 ET

FB45043 | FULLBLOOD BULL

Mayura L0010 (FB45053) has rapidly become one of the most influential Fullblood Wagyu sires in the world through an unparalleled combination of elite pedigree, genomic excellence, and real-world harvested progeny performance. A direct son of the legendary Mayura Itoshigenami JNR and backed by the powerful Aizakura maternal line, L0010 has more than 1,900 registered progenies, over 1,300 analyzed offspring, and more than 100 harvested carcasses contributing to his highly reliable BREED-PLAN evaluations. Commercial harvest results from the Mayura branded beef program report progeny averaging 10.74 Digital Marble Score, 448.8 kg (989 lb) Hot Standard Carcass Weight, and 106.7 cm² Eye Muscle Area, with standout carcasses reaching 13.33 Digital Marble Score, 124 cm² ribeye, and 486 kg (1,071 lb) Hot Carcass Weight. His Angus F1 progeny have captured Most Valuable Pen honors in Australia's prestigious Ekka Wagyu Paddock-to-Plate competition, while his steers continue to top harvest groups in both Australia and the United States. Ranking among the breed's elite for Marble Score, Carcass Weight, Eye Muscle Area, and every major profitability index, Mayura L0010 has become the benchmark for combining elite carcass quality, growth, and commercial profitability into one complete genetic package.

MAYURA L0010 LINEAGE

Donor dam TR Ms Takamichiguni 5375C (FB26407) combines two highly respected Fullblood Wagyu bloodlines in a female designed to deliver both maternal strength and carcass excellence. 6 carcass progenies recorded with 4 of the 6 hitting the top grade with an average Hot Carcass Weight as 908.

Sired by Takamichi Doi (FB7970), a proven source of exceptional marbling, ribeye expression, and carcass merit, and backed by the productive LTR Ms Shigekikuyoshi 021 (FB12931) cow family, she offers the balance of fertility, structural soundness, longevi-

ty, and genetic consistency demanded by today's progressive Wagyu breeder. Selected by R-C Ranch for the strength of her pedigree and producing potential, 5375C represents the kind of donor female capable of transmitting elite replacement females, future herd sires, and premium beef genetics. Her descendants carry the maternal predictability and carcass-driven performance that remain the cornerstone of the R-C Ranch breeding philosophy—producing cattle that excel from pasture to plate.

MYM ARUBIAL UNITED P0342

FB61231 | FULLBLOOD BULL

MYM Arubial United has quickly established himself as one of the most influential growth-oriented Fullblood Wagyu sires in the breed. Bred in Australia and now utilized internationally, United combines the industry's most proven Japanese foundation genetics with exceptional phenotype, structural integrity, and elite performance. His pedigree blends the carcass excellence that has defined Australian Wagyu breeding with an uncommon ability to transmit additional growth and scale without sacrificing the premium carcass quality expected from Fullblood cattle.

What separates United from many modern sires is his ability to consistently sire cattle that excel for growth while maintaining breed-leading carcass merit. His BREEDPLAN figures have placed him among the breed's elite for 200-, 400-, and 600-day growth, carcass weight, and overall profitability indexes. As his progeny have entered production across multiple countries, breeders have consistently reported offspring that are long-bodied, structurally correct, heavy-muscled, and easy doing, with tremendous consistency from calf crop to calf crop.

United's influence continues to expand through both his sons and daughters. His progeny have become highly sought after by progressive Fullblood breeders because they combine added performance with the marbling genetics that commercial beef programs demand. Sale catalogs and breeding programs routinely highlight United offspring for their explosive growth, balanced carcass profiles, and ability to move programs forward genetically, making him one of the emerging sire lines in the Wagyu breed today.

ITOSHIGENAMI TF148

FB3682 | FULLBLOOD BULL

Itoshigenami TF148 (FB3682) is universally recognized as one of the greatest marbling sires ever exported from Japan and one of the true foundation bulls of the modern Wagyu breed. Sired by Shigeshigenami and backed by the legendary Kumanami bloodline, TF148 has established an unmatched legacy through documented commercial harvest performance. His progeny average an impressive 970-pound carcass weight while achieving an extraordinary 8.6 Australian Beef Marbling Score, proving his unique ability to combine growth with elite carcass quality. For decades, his offspring have been recognized for exceptionally fine marbling, large ribeye area, superior carcass consistency, soft low melting-point fat, structural correctness, and outstanding dispositions. His influence extends through many of the world's most elite Wagyu bloodlines, including numerous internationally recognized herd sires and premium branded beef programs. Backed by thousands of harvested progeny and high-accuracy BREEDPLAN evaluations, TF148 remains the benchmark by which marbling sires are measured and continues to be one of the most proven and profitable carcass genetics in the history of the Wagyu breed.

ITOSHIGENAMI TF 148 LINEAGE

Donor Dam TBR Yasu 1-3 2141Y (FB14296) is a proven donor female whose influence continues to grow within the R-C Ranch breeding program. Sired by the renowned Itomichi TF 728 (FB7585) and backed by the productive TBR Yasu cow family through TBR Yasu 9022W (FB10496), she blends elite carcass genetics with outstanding maternal strength, structural integrity, longevity, and brood cow quality. Developed by the respected Triangle B Ranch program, 2141Y has earned her reputation by consistently producing the kind of female's worthy of donor status, with multiple daughters retained in the R-C Ranch herd. Her descendants exhibit the balance, capacity, femininity, and genetic predictability expected from one of the breed's most dependable maternal lines, making them ideal candidates for producing future donor females, herd sires, and premium Fullblood Wagyu genetics.

Donor dam ... Every great cow family begins with a female that consistently gets the job done! **UKB MS 1313** (FB11831) earned that reputation as part of the renowned Marble Ranch breeding program, where generations of cattle were developed with an emphasis on maternal strength, structural integrity, longevity, and the ability to produce elite Fullblood genetics. The daughters selling today carry forward that proven maternal influence while fitting seamlessly into the R-C Ranch philosophy of

breeding cattle that excel not only on paper, but from pasture to plate. These females offer the opportunity to build on a respected foundation cow family backed by genetics that have stood the test of time. UKB MS 1313 was a major donor for Marble Ranch. They harvested 9 as of their past production sale. The most impressive Marbling carcass out of her was a calf by Shigesheetani for a 20.79 REA and 43.21% IMF.

WORLD K'S SHIGESHIGETANI

FB2907 | FULLBLOOD BULL

World K's Shigesigetani is universally recognized as one of the greatest carcass sires in Wagyu history. A direct son of World K's Haruki 2 and the legendary donor Suzutani, he combines the proven Monjiro bloodline with the renowned Kumanami maternal family responsible for some of the breed's highest marbling cattle. World K documented 3,800 harvested F1 progeny, with an incredible 90% grading three full quality grades above USDA Prime (Australian Marble Score 9+), while the remaining 10% still achieved Prime to Prime+ quality. His offspring consistently transmit exceptional marbling, large ribeye area, superior carcass yield, structural soundness, body length, and outstanding disposition. As the sire of the legendary Bar R Shigesigetani 30T and countless elite breeding cattle worldwide, FB2907 remains one of the most proven and influential Fullblood Wagyu sires ever produced, with decades of documented carcass performance validating his status as a true breed-defining genetic powerhouse.

TBR Kikutnami 4051A is a uniquely bred Fullblood sire that combines rare foundation genetics with two of the breed's most respected carcass-producing bloodlines. A direct son of Kikutsurudo TF146 and out of an Itoshigenami TF148 daughter, Kikutnami blends the highly valued Tanifuku-Doi and Kumanami influences into one concentrated pedigree. He offers breeders an important and practical route to TF146 genetics while reinforcing marbling potential, carcass quality, maternal strength and pedigree balance through the proven Itoshigenami line. Kikutnami has been recognized as one of Triangle B's cornerstone sires for rotational breeding, and his daughters and descendants continue to be retained in prominent donor and herd-sire families. His influence can be found in breeding programs using Kikutnami-line females with today's leading carcass genetics, demonstrating the lasting maternal value and mating flexibility of the line. Carcass progeny have been as consistent and balanced as any sire we've used to date. 100% of his carcass progeny have hit our mid carcass grade or higher. Mating 4051A x FB15525 (see sale daughters of this mating) have been one of our favorite matings for creating balanced progeny who perform across all desired traits. (See carcass images.) His foundational pedigree and productive female descendants make TBR Kikutnami 4051A a valuable genetic resource for breeders seeking rare Tajima influence, maternal reliability and long-term carcass potential.

TBR Shigenaminami 3024Z is a uniquely bred Fullblood sire that combines two of the most respected carcass-producing bloodlines in Wagyu history. A direct son of World K's Shigesigetani and out of an Itoshigenami TF148 daughter, he concentrates the marbling power of the Shigesigetani, Suzutani, Itoshigenami and Kumanami influences into one valuable genetic package. Recorded at approximately 67.6% Tajima influence, 3024Z was developed to transmit carcass quality, fine marbling, maternal value and long-term

breeding flexibility. He has been recognized as one of Triangle B Ranch's cornerstone sires for rotational breeding, and his influence continues through sons and daughters being incorporated into progressive Fullblood programs. Modern descendants are being paired with leading Australian performance genetics, demonstrating the continued relevance and adaptability of his pedigree. 3024Z has many sons working for the supply chain. He produces high marbling without sacrificing growth, and his sons have proven to be just as valuable for siring carcass progeny. Ranks 4th in program history for avg progeny carcass value. (See carcass images.) TBR Shigenaminami 3024Z remains an important foundation sire for breeders seeking concentrated carcass genetics, proven maternal bloodlines and a dependable bridge between historic Japanese genetics and today's performance-driven Wagyu cattle.

Donor Dam TBR Yasu 1-3 2141Y (FB14296) is a proven donor female whose influence continues to grow within the R-C Ranch breeding program. Sired by the renowned Itomichi TF 728 (FB7585) and backed by the productive TBR Yasu cow family through TBR Yasu 9022W (FB10496), she blends elite carcass genetics with outstanding maternal strength, structural integrity, longevity, and brood cow quality. Developed by the respected Triangle B Ranch program, 2141Y has earned her rep-

utation by consistently producing the kind of female's worthy of donor status, with multiple daughters retained in the R-C Ranch herd. Her descendants exhibit the balance, capacity, femininity, and genetic predictability expected from one of the breed's most dependable maternal lines, making them ideal candidates for producing future donor females, herd sires, and premium Fullblood Wagyu genetics.

TBR ITOSHIGEFUKU 9059W LINEAGE

TBR Itoshigefuku 9059W is a proven Triangle B foundation sire combining the performance and carcass strength of Itoshigefuji TF147 with the productive maternal influence of the Hikokura family. A direct son of TF147 and out of TF 713, 9059W was designed to transmit additional frame, early growth, body capacity, carcass-weight potential and maternal

value while maintaining the marbling ability expected from elite Fullblood Wagyu genetics. His pedigree offers valuable Shimane and Okayama influence for breeders seeking an outcross to intensely Tajima-bred cattle, and his daughters and sons continue to appear in established Fullblood breeding programs. He has been used in matings with females carrying Sanjiro, Fukutsuru 068, Yasufuku Jr., Michifuku, Kitaguni Jr. and Chisahime-family genetics, demonstrating his usefulness for adding size and performance to concentrated marbling pedigrees. Recognized as one of Triangle B Ranch's cornerstone sires for rotational breeding, TBR Itoshigefuku 9059W remains an important genetic resource for breeders seeking balanced growth, maternal strength, carcass potential and long-term herd-building value. While a verified public sire-specific harvest summary is not presently available, his direct TF147 pedigree, continued commercial use and documented progeny make him a valuable foundation sire for balanced and profitable Fullblood Wagyu production.

Itozuru Doi (FB13044) is one of the most influential maternal foundation sires in the history of the Wagyu breed, combining legendary Japanese carcass genetics with exceptional female productivity. Descending from the renowned Shigekaneami and Yasuzuru Doi bloodlines, he consistently transmits superior marbling, carcass balance, ribeye expression, structural integrity and long-term breeding value. His daughters have earned an international reputation for exceptional udders, fertility, milk production, longevity and productive cow families, making Itozuru Doi one of the breed's premier cow-makers. His influence extends throughout many of today's elite donor programs, while his sons and maternal descendants continue to impact Fullblood breeding operations around the world. Although a publicly verified sire-specific harvest database has not been released, decades of commercial use have established Itozuru Doi as one of the breed's most dependable sources of balanced carcass merit, maternal excellence and profitable, sustainable Wagyu genetics.

Kousyun YH11 is one of the rarest direct sources of the legendary Yasufuku J930 genetics available outside Japan. One of only two sons of Yasufuku J930 represented in the United States, Kousyun was DNA-verified to Yasufuku J930 and Okuito 9, making him an authentic direct connection to one of Japan's most celebrated marbling and tenderness families. Yasufuku J930 sired three of Japan's most respected marbling bulls — Yasufuku 165-9, Fukusakae and Yasuhira — and his

bloodline dominated the ninth Zenkoku, producing one champion and appearing as the grandsire of two others. Descendants of the broader Yasufuku family have produced Japanese carcasses selling for approximately \$42,600 to \$97,000, demonstrating the extraordinary carcass value associated with this pedigree. Kousyun himself remains extremely rare, with only 40 U.S.-registered progenies reported as of May 1, 2019, offering breeders a valuable and less widely used alternative to his paternal half-brother, Yasufuku Jr. Documented embryo-transfer calves include heifers weighing 64 and 65 pounds at birth, although no comprehensive public sire-specific harvest summary is presently available. With a tenderness score of 7 and a pedigree built around elite Tajima carcass quality, Kousyun represents a rare opportunity to introduce proven Yasufuku J930 influence, genetic diversity and historic Japanese marbling potential into a progressive Fullblood program.

JVP Fukutsuru-068 is one of the most proven and historically important carcass sires in American Wagyu history. A 100% Tajima-line bull imported from Japan in 1994, Fukutsuru combines the legendary influence of Yasumi Doi and Kikutsuru—the famed “Hyogo Cow”—twice within his pedigree. His reputation was established through directly measured Washington State University progeny testing, where he ranked No. 1 for marbling in every National Wagyu Sire Summary published from 2001 through 2016 and remained No. 2 in the 2017 evaluation. In the 2001 summary, Fukutsuru posted the highest marbling EPD in the entire test at +0.76, backed by 79 harvested Halfblood progeny representing nine contemporary groups—substantially ahead of the next-highest sire at +0.45. His progeny test also included 33 carcass records for ribeye area and external fat, along with measured birth- and weaning-weight information. Fukutsuru is best known for transmitting exceptional intramuscular fat, fine and abundant marbling, moderate birth weight, quiet disposition and premium terminal carcass quality. As of May 1, 2019, he had 372 registered progenies in the United States and 961 in Australia, demonstrating his tremendous international influence. While a complete public report of average carcass weight, harvest age and grading percentages is not available, few early foundation sires possess Fukutsuru's depth of directly measured progeny evidence or his sustained leadership for marbling. With an SCD genotype of AA and tenderness score of 7, JVP Fukutsuru-068 remains a benchmark source of proven Tajima carcass excellence.

JVP FUKUTSURU-068 LINEAGE

Donor Dam, TBR Hikofuku 3-3 2110Y (FB15528) represents the kind of elite donor female that has helped shape progressive Fullblood Wagyu breeding programs. She is a marquee donor for the R-C program. On the 7-carcass progeny harvested, 6/7 hit the top grade. One MIJ recorded at 36.19%. 2 of her sons 2K9 and 2K10 hit 36%.

Sired by the legendary World K's Sanjiro (FB2501), one of the breed's most influential carcass sires, and backed by the proven TBR Hikofuku cow family through TBR Hikofuku 3 9063W (FB11170), she combines generations of genetics recognized for exceptional marbling, maternal consistency, structural

integrity, fertility, and longevity. Developed within the renowned Triangle B Ranch program, 2110Y brings together two of the breed's most respected bloodlines in a female designed to produce elite breeding cattle. The daughters selling from this donor carry the maternal strength, genetic predictability, and carcass potential that have made these genetics highly sought after by leading Wagyu breeders. At R-C Ranch, we believe lasting cow families are built on proven maternal excellence, and the influence of 2110Y provides the kind of foundation capable of producing outstanding replacement females, herd sires, and premium beef genetics for generations to come.

JVP FUKUTSURU-068 LINEAGE

Donor Dam TBR Hikofuku 4-1 2116Y (FB14292) represents the type of donor female that builds cow families capable of influencing a breeding program for generations. Developed by the renowned Triangle B Ranch, she combines the proven carcass excellence of World K's Sanjirou (FB2501) with the maternal power and longevity of the respected TBR Hikofuku cow family through TBR Hikofuku 4 9064W (FB11171). This genetic combination has long been recognized for producing cattle that balance elite marbling, ribeye expression, structural integrity, body capacity, fertility, and maternal productivity.

Selected by R-C Ranch for her exceptional breeding value, 2116Y has become an important maternal influence within the program. Her daughters have been retained to strengthen the R-C donor battery, continuing the genetic consistency, brood cow

quality, and carcass potential that have made the Hikofuku family one of the most respected maternal lines in the Fullblood Wagyu breed. The consistency found throughout her descendants reflects the kind of predictability serious breeders seek when building elite cow families.

At R-C Ranch, we believe the value of a donor female is measured not simply by her pedigree, but by the quality of the cattle she leaves behind. Descendants of 2116Y continue to demonstrate the maternal strength, structural correctness, and carcass-oriented genetics demanded by today's progressive Wagyu industry. Whether producing future donor females, herd sires, or cattle designed to excel from pasture to plate, the influence of TBR Hikofuku 4-1 2116Y provides a proven genetic foundation that will continue to add value for generations.

TBR SHIGETANIFUKU 3009Z

FB15527 | FULLBLOOD BULL

TBR ShigetaniFuku 3009Z combines one of the most proven carcass pedigrees in the Wagyu breed with the maternal strength that has made Triangle B Ranch genetics respected throughout the industry. A direct son of the legendary World K's Shigesheetani and backed by the productive TBR Hikohime cow family, 3009Z offers breeders an exceptional balance of marbling genetics, structural integrity, fertility and long-term cow productivity. His offspring have been selected for moderate birth weight, excellent disposition, functional replacement females and balanced carcass performance, making him an outstanding sire for programs focused on sustainable genetic progress. 70+ carcass progeny! His F1 carcass progeny have been as prolific marblers as any other sire in program history. Heavily used by Don Brown in the TBR system, before being acquired by R-C and can be found in the pedigrees of many donor females around the country. (See carcass images.) TBR ShigetaniFuku 3009Z remains a valuable foundation sire for breeders seeking elite marbling genetics, dependable maternal value and balanced Fullblood performance.

M6 Kitateruyasudo 7102E is a powerful carcass-oriented Fullblood sire combining the proven Tajima influence of Kitateruyasudo J2810 with the elite Michifuku genetics represented through his maternal line. Registered as FB33375 and born October 24, 2017, 7102E is backed by a pedigree selected for premium marbling, fine-textured intramuscular fat, eye-muscle area and superior eating quality. Published Breedplan figures reported an Eye Muscle Area EBV of +4.8, Marble Score of +1.7 and

Marble Fineness of +0.33, along with a Wagyu Breeder Index of 121, Self-Replacing Index of 151 and Fullblood Terminal Index of 131. These indicators position him as a valuable mating option for breeders seeking to improve carcass quality, ribeye dimension and marbling consistency while retaining maternal function and Fullblood breeding value. His sire, Kitateruyasudo J2810, is one of the influential Westholme foundation bulls imported from Japan, while his maternal pedigree carries the carcass excellence of World K's Michifuku and the highly regarded Nakahana cow family. Although no complete public sire-specific harvest summary has been released for 7102E, his pedigree and published genetic evaluations identify him as a strong source of balanced Tajima carcass merit for progressive Fullblood and terminal breeding programs.

REF

TBR MITSUITOFUKU 2149Y

FB20350 | FULLBLOOD BULL

TBR Mitsuitofuku 2149Y is a powerful, growth-oriented Fullblood sire combining the added performance and maternal strength of Mitsuhiokura 149 with the proven Triangle B cow family represented by TBR Hikofuku 4 9064W. Registered as FB20350, 2149Y has produced registered sons and daughters from a variety of elite maternal pedigrees, with his progeny marketed as replacement females, donor prospects and potential herd sires. He has earned a reputation for adding scale, body capacity, muscle and practical beef-production value, and published sale literature has described him as a 2,600-pound beef maker. His sire, Mitsuhiokura 149, is widely recognized for transmitting growth, milk and additional thickness, while his maternal pedigree introduces Itoshigefuji influence for added balance and Fullblood breeding value. TBR Mitsuitofuku 2149Y is an especially useful mating option for programs seeking to add size, substance and maternal performance to more moderate, heavily carcass-oriented females. His progeny have the highest avg fullblood HCW in our program at a whopping 1032 lb. His documented registered progeny and continued commercial semen use confirm his lasting value as a performance-oriented Fullblood sire.

BBW Fukutsuru 1 1706E (FB39779) is a Fullblood Wagyu sire carrying the proven carcass heritage of the renowned

Fukutsuru bloodline, one of the most respected sources of marbling and eating quality in the breed. His pedigree traces to genetics recognized internationally for producing exceptional intramuscular fat, fine marbling texture, premium tenderness and consistent carcass quality. Developed for modern Fullblood breeding programs, 1706E offers breeders the opportunity to incorporate elite Tajima carcass genetics while maintaining structural soundness, balanced performance and productive replacement females. His offspring have been retained within registered breeding programs, reflecting confidence in his long-term genetic value. BBW Fukutsuru 1 1706E represents a valuable source of proven Fukutsuru genetics for breeders focused on premium beef quality, balanced maternal function and long-term Fullblood improvement.

REF

SHIGEFUKU J1822

FB6538 | FULLBLOOD BULL

Shigefuku J1822 (FB6538), internationally known as Westholme 005, represents one of the rarest and most valuable sources of original Kedaka/Tottori genetics available outside Japan. A direct son of the legendary Dai 20 Hirashige J287, whose influence shaped the modern Kedaka population, Shigefuku contributes the growth, skeletal dimension, maternal productivity and structural integrity that distinguish this historic bloodline. Registry records document nearly 200 registered progenies in the United States and nearly 300 in Australia, while his influence continues to expand through numerous breeding sons, donor daughters and internationally recognized descendants found in elite Fullblood programs worldwide. Modern breeders continue to utilize Shigefuku genetics to improve genetic diversity, growth, body capacity, maternal strength and balanced beef production while complementing heavily Tajima-based pedigrees. Shigefuku has made lasting contributions to the global Wgyu breed!

Reference sire ... TF 813 Kimitofuku is a proven Takeda-bred Fullblood sire whose value is supported by actual harvested-progeny results. Registered as FB10687, he is a direct son of the legendary Itoshigenami TF148 and descends maternally from the elite Hikokura family through TF 709 and Kimifuku 3, combining two of Takeda Farms' most respected sources of premium carcass quality. In Lone Mountain Cattle Company's 2021 Sire Performance Study—an evaluation of more than 1,550 carcasses using Dr. Keigo Kuchida's objective Japanese carcass-imaging technology—TF 813 ranked No. 1 among sires for intramuscular-fat percentage based on 18 harvested progenies. He also ranked near the very top for marble fineness, further validating his ability to transmit not only abundant marbling, but the fine, evenly distributed fat associated with exceptional Wagyu eating quality. An earlier nine-head progeny summary reported a 32.91% average IMF before his documented carcass sample expanded to 18 head. TF 813 has also produced influential breeding sons and valuable replacement daughters, extending his carcass impact into the next generation. Few Fullblood sires combine this level of Takeda pedigree strength with documented progeny harvested through a controlled carcass-evaluation program. TF 813 Kimitofuku represents a proven source of marbling, fineness, tenderness and premium beef quality for progressive Fullblood and terminal Wagyu programs.

SANJIRO 3 LINEAGE

REF

SANJIRO 3

FB2900 | FULLBLOOD BULL

Sanjiro 3 (FB2900) is one of the most proven carcass sires in the Fullblood Wagyu breed. A full brother to World K's Sanjiro and a direct son of World K's Michifuku out of the legendary World K's Suzutani, he combines one of the breed's most respected carcass pedigrees with independently published progeny performance. In the 2017 Washington State University National Wagyu Sire Summary, Sanjiro 3 ranked No. 1 for marbling with a +1.01 Marbling EPD, based on 56 harvested progeny across seven contemporary groups. He also recorded a +1.50 Ribeye Area EPD and -0.02 External Fat EPD, demonstrating his ability to increase marbling and ribeye area while maintaining lean carcass composition. Sanjiro 3 remains a proven source of elite marbling, premium carcass quality and exceptional eating quality for Fullblood and terminal Wagyu breeding programs.

WORLD K'S YASUFUKU JR. LINEAGE

WORLD K'S YASUFUKU JR.

FB5061 | FULLBLOOD BULL

World K's Yasufuku Jr. is a rare, progeny-proven foundation sire whose elite Japanese pedigree is validated by exceptional harvested-carcass performance. Registered as FB5061, he is a direct son of the legendary Yasufuku J930 and out of the Monjiro daughter Kaneko 5, concentrating the highly valued Yasumi Doi influence multiple times within his pedigree. In the 2017 Lone Mountain Sire Performance Study, Yasufuku Jr. ranked No. 1 among direct sires for intramuscular-fat percentage, with 35 objectively imaged progeny carcasses averaging an extraordinary 33.34% IMF. His influence was equally impressive through his daughters, as

approximately 35 to 36 carcasses from maternal descendants averaged more than 34% IMF, while Yasufuku Jr. ranked No. 1 as a sire of dams for marble fineness. Broader Australian BreedPlan records have represented him with approximately 243 carcasses and published breeding values of +2.6 for Marble Score and +8.7 square centimeters for Eye Muscle Area, confirming his ability to transmit both premium marbling and valuable ribeye dimension. Published progeny reports also credit his offspring with approximately 1.94 pounds of average daily gain and describe them as exceptional terminal cattle with very fine marbling. His sons and daughters have continued that influence in the next generation, producing elite herd sires, donor females and carcasses exceeding 30% and even 40% IMF. Few foundation sires combine this concentration of historic Tajima genetics with documented direct-progeny, maternal-grandsire and international carcass evidence. World K's Yasufuku Jr. represents a proven source of extreme IMF, marble fineness, ribeye quality and lasting maternal carcass influence.

REF

KURO KIN SHIKIKAN E10

FB | FULLBLOOD BULL

KURO Kin Shikikan E10 (AI) has established himself as one of Australia's most proven modern Wagyu sires through an extensive progeny-performance database. Rather than relying on limited individual harvest summaries, his reputation is built upon one of the largest carcass datasets available within the Australian Wagyu BreedPlan system. Current Australian Wagyu Association records include approximately 394 recorded progeny, 164 carcass-recorded progeny, 59 daughters and genetics represented in 14 herds, providing exceptional confidence in his breeding values. His carcass evaluation is highlighted by a

powerful +2.3 Marble Score EBV and +0.33 Marble Fineness EBV, confirming his ability to consistently transmit superior marbling and the fine, evenly dispersed intramuscular fat associated with premium Wagyu beef. He also records a positive +1.0 Eye Muscle Area EBV while maintaining balanced growth and maternal performance, reflected by elite economic indexes of +148 Self-Replacing Index, +130 Fullblood Terminal Index, +131 F1 Terminal Index and +134 Wagyu Breeder Index. High EBV accuracies—many exceeding 90 percent—demonstrate that these values are supported by a large and reliable progeny population rather than prediction alone. Although the Australian BreedPlan system does not publish individual harvested carcass averages such as IMF percentage or average carcass weight for this sire, the inclusion of 164 carcass-recorded progeny provides one of the strongest publicly available validations of his ability to consistently transmit premium carcass quality, superior marbling and balanced production traits. KURO Kin Shikikan E10 represents a proven source of predictable carcass merit backed by one of the most comprehensive modern progeny datasets in the Wagyu breed

REF

M6 RANCH MR RIGHT 460M

AuWA M6RF24V460M | FULLBLOOD BULL

- Elite Australian Fullblood Wagyu sire ranking in the Top 1% for F1 Terminal Index and Top 2% for both the Beef Breeding Index (BFI) and Fullblood Terminal Index (FTI).
- Combines breed-leading carcass genetics with Top 1% Marble Score, Top 2% Eye Muscle Area, and Top 3% Marble Fineness, positioning his progeny to excel where premium beef value is created.
- Selected by R-C Ranch to add elite carcass quality, marbling, muscle expression, and overall profitability to the next generation of Wagyu genetics.
- Females selling safe in calf to Mr. Right 460M carry significant added value, offering buyers the opportunity to acquire offspring backed by one of Australia's highest-ranking young sires for economically important traits.
- A rare opportunity to invest in genetics that combine elite maternal cow families with a service sire whose EBV profile places him among the breed's most exciting young Fullblood Wagyu bulls, delivering greater value from pasture to plate.
