

*Producing Elite*  
**POLLED GENETICS**  
*for the Future!*

Announcing the partnership of MRI & JH2 to produce elite polled Wagyu genetics to the world market. Two years in planning this exclusive partnership was formed to produce high performance polled Wagyu with genetic diversity and carcass performance.

Founded in Nebraska in 1934 and breeding Wagyu since 1993 the Morgan family is involved in all aspects for the cattle industry to include seedstock, commercial cattle, finishing cattle and meat production. The Morgan Family markets the final end product - high quality meat to fine dining restaurants and direct consumers in six countries plus the US. The Hall family started in the cattle industry during the 1930's in the Missouri Ozarks with a primary focus in the commercial cattle business. Although new to the Wagyu industry the Halls believe there is great potential in the Wagyu breed. Both families believe there is value in combining resources and expertise to provide elite polled Wagyu genetics worldwide.
